Recent Management In  
Otorhinolaryngology Diagnosis Amp  
A systematic review found that ~ 38%  
of the general population complained  
of dyspepsia. Dyspepsia was more  
frequent in GERD patients than those  
without. These patients were at risk  
for a new diagnosis of GERD.  
Epigastric pain, early satiety, belching  
and bloating were more likely to  
respond to a PPI therapy compared  
with nausea.
